

Boost Your Mental Well-being During These Uncertain Times

While experiencing stress or anxiety over the health and economic fears brought on by COVID-19 is normal, if you don't take steps to cope with these feelings, you can put yourself at risk for long-term health effects.

Try these tips to keep your coronavirus-related stress and anxiety under control:

- **Stay informed, but don't obsess** - It can be easy to become overwhelmed by watching the news and reviewing the updates of the COVID-19 situation. While it's important to be informed of the situation, you should not obsess over the news.
- **Focus on what you can control** - Focusing on the things you can't control, like the course of the pandemic and actions of others, will only fuel anxiety and stress. Instead, focus on things that you have control over, including staying home when possible, washing your hands, wearing a mask and practicing social distancing.
- **Connect with friends and family** - Sometimes, the best way to cope with your stress is to talk to a loved one. Leverage technology to safely talk with friends or family during these times.
- **Use healthy coping mechanisms** - There are a variety of healthy ways to mitigate your stress and anxiety, which include getting exercise, sticking to a routine, spending time outside and meditating.
- **Talk to a professional** - If your stress or anxiety is overwhelming, contact a licensed mental health professional.

The COVID-19 pandemic has disrupted daily life and caused stress and anxiety for many, even as we enter our new normal. If left unchecked, these feelings can have negative effects on your mental well-being. Take steps today to keep your stress and anxiety under control.

Tips For Surviving The Summer Heat

Summer heat can be more than uncomfortable - it can be a threat to your health, especially for children and older adults. Whatever your age, don't let the summer heat get the best of you. There are two types of heat illnesses to keep an eye out for this summer:

1. **Heat exhaustion** occurs when a person cannot sweat enough to cool the body, usually the result of not drinking enough fluids during hot weather. A person suffering from heat exhaustion must move to a cool place and drink plenty of water. Heat exhaustion signs include:
 - Dizziness or weakness
 - Nausea or vomiting
 - Blurry vision
 - Body temperature rising to 101 F
2. **Heatstroke** is the result of untreated heat exhaustion and is a serious medical emergency that must be treated quickly by a professional. Heatstroke signs include:
 - Unawareness of heat or thirst
 - Confusion or delirium
 - Loss of consciousness
 - Body temperature rising above 101 F

Live Well, Work Well – July 2020

To prevent heat illness this summer, make sure to drink plenty of water, wear lightweight and light-colored clothing and eat light, refreshing foods. In addition, try to stay inside as much as possible, doing chores early or late in the day. By keeping these tips in mind, you're on your way to beating the heat!

Socially Distance Yourself This Summer

You've probably heard the term "social distancing" a lot in the past few months. Keeping your distance from others has been crucial to slowing the spread of COVID-19. It will also be a key component in staying healthy as things continue to reopen.

To properly practice social distancing this summer, keep the following tips in mind:

- Stay at least 6 feet - which is about two arms' lengths - away from others.
- Avoid gathering in groups, mass gatherings or large crowds whenever possible.
- Wear a protective face mask or covering when out in public.
